

# IHUOMA NKECHI BRIDGET

Agentic AI · Cloud & DevOps Engineer · Technical Support

| [LinkedIn](#) | [Github](#)

## PROFESSIONAL SUMMARY

Results-driven Agentic AI, Cloud & DevOps Engineer with demonstrated expertise architecting and automating multi-tier cloud infrastructure on AWS and Azure. Proven track record of cutting deployment cycles by 80%, sustaining 99.9% system uptime, and reducing cloud spend by 30% through intelligent resource optimization. Experienced integrating AI coding agents (Claude Code) into DevOps workflows for full infrastructure automation. Strong foundation in CI/CD, containerization, IAM security, and infrastructure-as-code (Terraform). Brings a rare blend of technical depth and customer-facing communication skills refined across banking, fintech, and distributed engineering teams.

## CORE TECHNICAL COMPETENCIES

**Cloud Platforms:** AWS (EC2, S3, RDS, VPC) · Azure (VMs, VNets)

**IaC & Automation:** Terraform · Claude Code · Bash · PowerShell

**CI/CD:** GitHub Actions · Git · Agile / Jira

**Containers:** Docker · Kubernetes

**Monitoring:** Prometheus · Grafana · Datadog

**Security:** IAM Policies · VPC · Firewall Rules · Compliance

**Web Servers:** Nginx (reverse proxy) · Apache HTTP Server

**OS & Networking:** Linux Admin · TCP/IP · DNS · Load Balancing

## PROFESSIONAL EXPERIENCE

### Cloud & DevOps Engineer Intern | CloudAdvisory

January – June 2026 Remote

- Provisioned and deployed a React application on AWS and Azure using Ubuntu OS and Nginx reverse proxy, achieving zero-downtime go-live.
- Automated full infrastructure lifecycle using Terraform and Claude Code — from VPC provisioning to three-tier application deployment on AWS and Azure.
- Deployed a static website to Amazon S3 and a production sales site on Ubuntu VM with MySQL RDS backend, isolated within a private cloud network.
- Managed complete Git workflow (track → stage → commit → deploy) and contributed directly to source code, maintaining clean version history.
- Applied Agile/Scrum methodology via Jira for sprint planning, successfully shipping two product increments on AWS within the first quarter.
- Designed and configured three-tier Azure network infrastructure: VNets, subnets, NSGs, and application security groups.
- Deployed professional website on Amazon Linux OS using Apache HTTP Server as the web server, meeting client SLAs.

### Cloud Security / DevOps Engineer | Technical Support | Digital Witch Community

2025 • Remote

- Architected and maintained AWS cloud infrastructure achieving 99.9% uptime through proactive observability stack (Prometheus, Grafana, Datadog) with auto-alerting.
- Engineered end-to-end CI/CD pipelines with GitHub Actions, reducing deployment lead time by 80% and increasing release frequency from bi-weekly to on-demand.
- Managed Docker containerized environments and Kubernetes orchestration, improving horizontal scalability and service resilience.
- Implemented least-privilege IAM policies, hardened VPC configurations, and firewall rules — zero security incidents during tenure.
- Optimized cloud resource allocation and right-sizing, cutting infrastructure costs by 30% without compromising performance SLAs.

- Developed comprehensive technical documentation and runbooks, reducing recurring support tickets by measurable margin.
- Provided rapid remote technical support ensuring uninterrupted operations across distributed team.

### Customer Support Officer | Ecobank Nigeria

Aug 2018 – Aug 2021 • Lagos, Nigeria

- Maintained 99% accuracy in customer account documentation and data entry across high-volume banking environment.
- Implemented validation procedures that reduced data entry errors by 25%, improving audit and compliance outcomes.
- Digitized customer documentation workflows, improving record retrieval speed and regulatory traceability.
- Created internal onboarding documentation, reducing ramp-up time for new staff by streamlining knowledge transfer.

### Banking Operations Support | Ecobank Nigeria

Sep 2017 – Jul 2018 • Lagos, Nigeria

- Processed high-value financial transactions with 100% accuracy, maintaining compliance documentation for audit purposes.
- Assisted with ATM troubleshooting and first-line technical issue resolution, bridging operations and IT support.

## FLAGSHIP PROJECT

### Pet Clinic Microservices Platform | *Cloud-Native Architecture on AWS & Azure*

*A production-grade, cloud-native microservices application simulating a real-world veterinary clinic management system — designed to demonstrate end-to-end DevOps and agentic AI automation capabilities.*

- Decomposed monolithic clinic system into independently deployable microservices: patient-service, appointment-service, billing-service, and notification-service using Docker containers.
- Containerized all services with Docker and orchestrated with Kubernetes (EKS/AKS), enabling auto-scaling, rolling deployments, and self-healing infrastructure.
- Provisioned all cloud infrastructure (VPCs, subnets, EKS clusters, RDS instances, IAM roles) using Terraform and Claude Code for full IaC automation.
- Built GitHub Actions CI/CD pipeline: automated testing → Docker image build → push to ECR/ACR → Kubernetes rolling deploy — zero manual steps.
- Integrated Prometheus + Grafana monitoring with custom dashboards for service health, latency, and resource utilization; Datadog APM for distributed tracing.
- Implemented API Gateway pattern with Nginx ingress controller, service mesh communication, and environment-specific config management via Kubernetes ConfigMaps & Secrets.
- Secured inter-service communication with IAM roles, network policies, and private VPC subnets — zero public exposure for data-tier services.

**Tech Stack:** AWS (EKS, RDS, ECR, S3) | Azure (AKS, ACR) | Terraform | Claude Code | Docker | Kubernetes | GitHub Actions | Nginx | Prometheus | Grafana | Datadog | IAM | Python/Node.js services

## KEY ACHIEVEMENTS

#### 80% Deployment Acceleration

Automated CI/CD pipelines slashed deployment time by 80%, increasing release velocity from bi-weekly to continuous.

#### 30% Cost Reduction

Strategic right-sizing and reserved instance optimization cut cloud operational costs by 30% without SLA degradation.

#### 99.9% System Uptime

Proactive monitoring with Prometheus, Grafana & Datadog maintained near-perfect availability across all managed services.

#### Zero-Downtime Cloud Migration

Successfully migrated on-premise infrastructure to cloud with zero downtime, zero data loss, and full compliance continuity.

## CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

- Google Professional IT Support Certificate (2025)
- Cloud Security / DevOps Engineer — Digital Witch Support Community (2025)

- IT Support — Digital Witch Support Community (2025)

EDUCATION

MBA – Business Administration in International Hospitality and Tourism

2024

Babes-Bolyai University, Cluj-Napoca, Romania

Higher National Diploma – Banking & Finance

2015

Lagos State University of Science and Technology (LASPOTECH), Ikorodu

ADDITIONAL INFORMATION

**Languages:** English (Fluent) | **Remote Work:** Experienced in async collaboration, self-directed work, and distributed team dynamics

**Interests:** Open-source contribution · Cloud architecture · Agentic AI automation · Remote work advocacy
